wants to read to be a leader of

and to

and to
As \( \text{TS} \) must be greater than \( 10 \)

Let \( \text{AC} \) meet \( \text{BC} \) at \( B \)

Not possible.

B cannot be \( 15 \) years old.

If \( n \) is \( 15 \), \( \text{CS} = (15 - 10) \)
All sites have been found by hand. X is a very rare type. No one will make a new one. Remember x is only x is. X is not x is.
Compute to Carry Sequence

\[ C_n \leftarrow 2N + N = 3N \leq 3(n-1) \]

\[ \text{Counted Merge Pair Order & Exit} \]
+ dynamics

lead to breach

as direct failure leads

Command — sensor failure

+ state

Command — any I node failure

for every node we have

- define described operation

Maclean
\[ \{ \text{age} | \text{age} \leq 0 \} \neq 0 \]

- \( \text{age} \), \( \text{age}^2 \) are 2 real and

\( \text{why} \ N \text{ and not } L \) ?

\( L \leftarrow N \)

\( \text{equal } \) \( \text{age} \) \( \text{and rest sec} \)

\( \overline{\text{it all}} \)
\[ \forall \epsilon > 0 \exists \delta > 0 \text{ s.t. } |x - 1| < \delta \Rightarrow |2\sqrt{x} - 1| < \epsilon \]

Consequently, \[ \lim_{x \to 1} 2\sqrt{x} = 2 \]
Sy with A
Sy	Sy

\[ L_1 = L_2 \]
\[ L_3 = L_5 \]
\[ L_2 > L_3 \]
\[ L_1 > L_5 \]

Global snapshot
msg as no change (free)
If a process tries to receive a message, it first checks if.

Next, the message is then sent to the receiver on the next exchange.

The exchange message can only happen after the exchange has been confirmed.

1. Checkpoint
2. Send messages and on
   exchange change
Molecules first visit. Next, a muscle read on Gi system. Set off muscles read on Gi system. The second measure. The first time? Go measure on Gi or not? I showed many times. I marked some on Case 2.
